Profile

Analytical cyber security analyst with two and a half years at Accenture. Engineered security into live Salesforce CRM and CPQ platforms for global clients, covering identity and access management, risk assessment, incident response and audit-ready governance. Currently completing MSc Cybersecurity Technology at Northumbria University London. Seeking a UK cyber security analyst, IAM, GRC or risk role from October 2026.

Key Skills

Identity and access: IAM, RBAC, multi-factor authentication, least privilege, access reviews

Governance, risk and compliance: ISO/IEC 27001, SOC 2, NCSC CAF, Cyber Essentials Plus, UK GDPR, risk register, gap analysis

Risk and vulnerability: risk assessment, threat modelling, vulnerability assessment, CVSS, OWASP

Data protection: encryption, key management, data classification, API security

Detection and response: incident response, intrusion detection, audit logging, monitoring

Engineering and cloud: DevSecOps, CI/CD, secure code review, AWS, Salesforce

Machine learning: CNN-LSTM, GAN data augmentation, SHAP, CIC-IDS2017

Soft skills: communication, teamwork, leadership, problem solving, attention to detail, stakeholder management

Professional Experience

Advanced App Engineering Analyst – Salesforce Security and IAM
Accenture, Bengaluru, India | November 2024 – June 2025

- Architected end-to-end Salesforce security across profiles, permission sets, role hierarchy and sharing rules, enforcing least privilege and closing over-provisioned access paths found in review.
- Deployed multi-factor authentication and IAM controls across production orgs, reducing credential-based risk without disrupting delivery.
- Protected sensitive customer and commercial data through encryption, data classification, key management and secure API integrations.
- Conducted risk assessments, vulnerability analysis and threat modelling across CRM and CPQ, prioritising findings by severity and driving remediation with platform owners.
- Led incident response for platform security events, shortening time to containment and feeding root causes back into preventative controls.
- Authored access control standards, security policies and audit logging documentation, mapped to ISO/IEC 27001 and SOC 2 for client audits.
- Embedded security into DevSecOps and CI/CD pipelines through secure deployments, security testing and code review.

Advanced App Engineering Associate – CPQ/CLM Delivery and Data Security
Accenture, Bengaluru, India | November 2022 – November 2024

- Configured and maintained Conga CPQ and CLM solutions for enterprise clients under contractual and regulatory constraints.
- Applied access controls and data-handling rules to contract data, aligning lifecycle management with privacy standards.
- Gathered requirements from stakeholders and translated them into secure, compliant designs documented for audit and handover.

- Collaborated with QA and business teams to test releases and manage delivery risk ahead of go-live.
- Delivered technical support and training on secure use of CPQ/CLM tooling for client users and internal teams.
- Received Accenture's Promising Talent award (July 2023) for consistently exceeding performance targets.

Projects

Risk and Compliance Gap Analysis – Consultancy Project
MSc Cybersecurity Technology | 2026

- Led risk and compliance for a simulated managed security provider serving healthcare, critical national infrastructure and financial services clients.
- Built the risk register and gap analysis against ISO/IEC 27001:2022 and UK GDPR, and ranked lab findings, including injection flaws rated CVSS 9.8, as business risks with clear ownership.
- Kept confirmed client gaps separate from lab-only evidence, and co-authored a phased remediation roadmap covering access control, incident response, backup and monitoring.

Hybrid CNN-LSTM Intrusion Detection with SHAP – MSc Dissertation
MSc Cybersecurity Technology | 2026

- Built a deep learning intrusion detection model on CIC-IDS2017, combining CNN pattern recognition with LSTM sequence analysis.
- Applied GAN data augmentation to catch rare attack classes, and used SHAP so a SOC analyst can see why traffic was flagged.
- Evaluated accuracy, precision, recall and false-positive rate.

Audio-in-Image Encryption System
Puducherry Technological University, India

- Developed a system hiding audio inside image files, protected with AES-256 and RSA encryption for secure data transfer.

Education

MSc Cybersecurity Technology with Advanced Practice
Northumbria University, London, UK | June 2025 – October 2026

Bachelor of Technology in Electronics and Communication Engineering
Puducherry Technological University, India | 2018 – 2022

Certifications

- Salesforce Certified Administrator
- Salesforce Certified Platform Developer I
- Salesforce Certified Platform App Builder
- Salesforce Certified Associate

Volunteering

Front of House Volunteer
LHA London Ltd, London | January 2026 – Present

- Welcome residents and visitors at a supported-housing charity, handling enquiries and personal information with discretion.
